

A photograph of a group of women and children in a room. In the foreground, a woman in a blue sari is looking down with her hand to her face, appearing distressed. Behind her, several other women are seated, some looking at a smartphone. A young child in a pink shirt stands to the right. The room has a window with a striped blind and a wooden door in the background.

CSR partnership proposal

Care she won't have to wait for.

Partner with Apni Sakhi Foundation to build a working path to care for women in Nimeda, Phagi block, Jaipur district.

apnisakhifoundation.in

Where women's care breaks down

She doesn't know it's a symptom.

White discharge, itching, tiredness and heavy periods get treated as normal, or never talked about.

She notices, but it's never checked.

The nearest test is in another town, a day's travel and a day's lost wages away.

She's checked, but never reaches care.

A referral slip isn't enough without someone to help her follow it through.

What the health team in Nimeda sees most: **white discharge, genital ringworm and anaemia**. All common, all treatable, and all too often left until late.

Nimeda, Phagi block, Jaipur district

34

ASHA workers we work through

40-50k

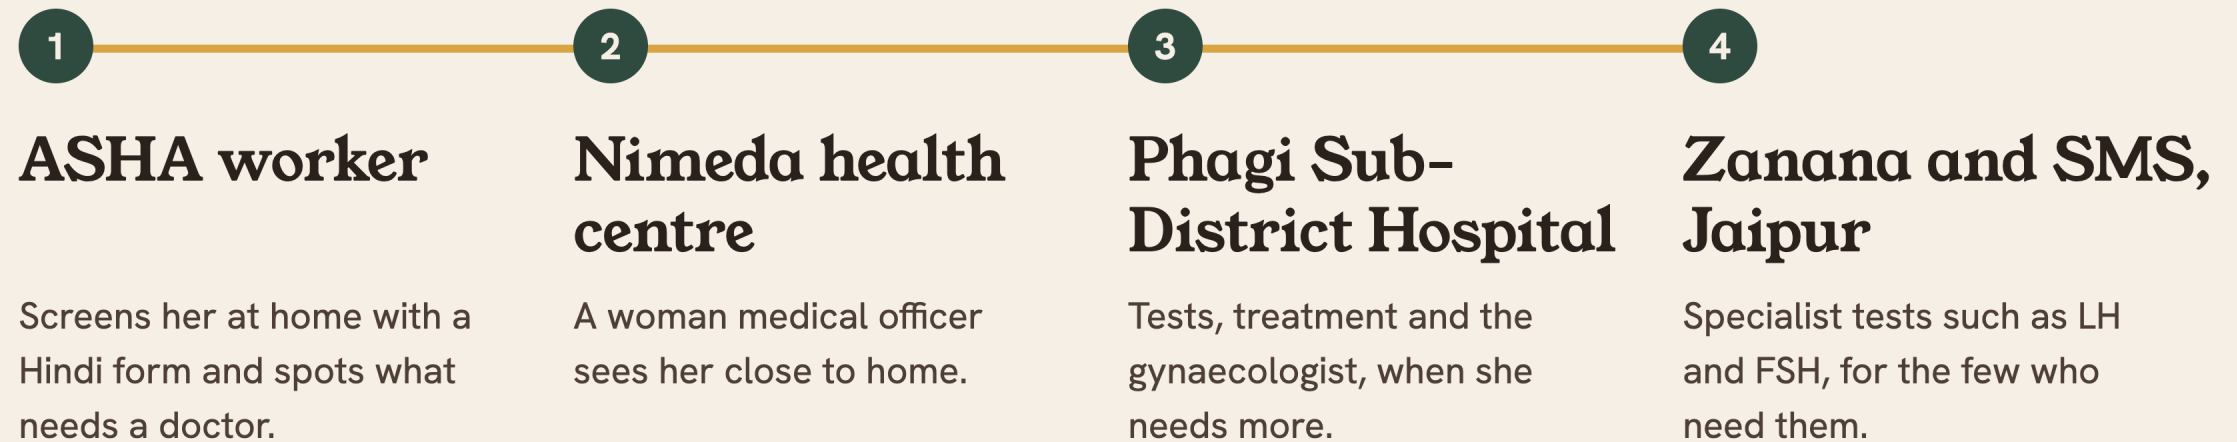

people in the area they look after

Invited

by the Block CMO, Phagi, to run this pilot

One path to care, inside the public health system

We don't build a parallel clinic. Our job is getting each woman through every step, and a referral counts as done only when a clinician has seen her.

Three programs, run as one sequence

KNOW

ASHA-led health sessions

Small groups on menstrual health, anaemia, white discharge, hygiene and pregnancy, using our Hindi guide.

Funds: printed guides, materials and ASHA training time.

CHECK

Early screening camps

One-day village camps with the PHC team and volunteer doctors: haemoglobin, blood pressure, sugar and a women's health consult.

Funds: tests, doctor time, transport and camp logistics.

CONNECT

Care connect

A named person helps each referred woman reach the Nimeda doctor or Phagi hospital, and checks in until she is seen.

Funds: transport, follow-up calls and help reaching government tests.

What we measure, and who confirms it

Measure	Confirmed by
Women screened at home	ASHA baseline form, reconciled weekly by serial number
Women referred	ASHA referral record
Women seen by a clinician	Nimeda PHC or Phagi Sub-District Hospital record
Time from symptom to care	Baseline and follow-up forms
Government scheme enrolment	Follow-up with each referred woman
PCOS-linked conditions	Tests for diabetes, insulin resistance and infertility, at Phagi and in Jaipur

Each level reports only what it can confirm. Partners get a quarterly report against these measures.

What we've done since August 2026

- Aug 2026** Incorporated in Jaipur as a Section 8 nonprofit
- 2026** Met the Block CMO, PHC doctor, ANMs, Phagi PMO and the Sub-District Hospital gynaecologist
- 2026** Invited by the Block CMO to pilot in Nimeda, through its 34 ASHA workers
- 2026** Wrote a 31-page Hindi health guide for ASHA workers, medically reviewed, plus a hygiene module
- 2026** Started a Hindi baseline screening form for every woman in the area

Coming up

Late 2026

First ASHA-led health sessions

Early 2027

First screening camp in Nimeda

Mid 2027

First quarterly impact report

Ways to partner

Adopt the Nimeda pilot

A full year of sessions, screening camps, Care connect and quarterly reporting, in your name.

[₹__ lakh a year]

Fund screening camps

One-day camps in Nimeda with the PHC team and volunteer doctors, with every result followed up.

[₹__ per camp]

Fund Care connect

Transport and follow-up for every referred woman, until a clinician has seen her.

[₹__ per woman]

Also welcome: doctors and nurses from your team at our camps, and research partnerships on women's health data.
